Rangkuman Diskusi Data CSV

Isi, ukuran, dan kolom dataset pelanggan dan penjualan

Laporan ini merangkum pembahasan tujuh file CSV di folder **simulation**: empat file sumber/ringkasan penjualan dan tiga file pelanggan untuk pemodelan churn.

File	Baris	Kolom	Isi
customers.csv	8,000	20	Profil pelanggan dan label churn.
orders.csv	25,000	28	Rincian transaksi, produk, pembayaran, pengiriman, retur, dan rating.
monthly_revenue.csv	75	10	Agregat pesanan dan pendapatan per bulan.
product_summary.csv	140	9	Ringkasan performa per produk.
customer_ml_dataset.csv	8,000	23	Dataset pelanggan hasil rekayasa fitur untuk pemodelan churn.
customer_train.csv	6,400	23	Subset untuk melatih model churn.
customer_test.csv	1,600	23	Subset untuk mengevaluasi model churn.

Baris yang ditampilkan adalah jumlah baris data, tidak termasuk header. Penulisan *customer_ml_dataset.scv* dipahami sebagai **customer_ml_dataset.csv**, sesuai nama file yang tersedia.

Kolom per file

Empat CSV penjualan memiliki skema yang berbeda sesuai tingkat detailnya.

customers.csv — 8,000 baris × 20 kolom

Profil pelanggan dan label churn.

Kolom: customer_id, country, age, gender, membership_tier, registration_date, total_orders, total_spend_usd, avg_order_value_usd, days_since_last_purchase, preferred_category, preferred_device, preferred_payment_method, acquisition_channel, reviews_given, avg_review_score, returns_made, wishlist_items, newsletter_subscribed, churned

orders.csv — 25,000 baris × 28 kolom

Rincian transaksi, produk, pembayaran, pengiriman, retur, dan rating.

Kolom: order_id, customer_id, order_date, year, month, quarter, day_of_week, product_name, category, unit_price_usd, quantity, subtotal_usd, discount_pct, discount_amount_usd, shipping_fee_usd, tax_pct, tax_amount_usd, total_amount_usd, payment_method, device_used, delivery_days, delivery_date, order_status, returned, customer_rating, session_duration_minutes, pages_viewed_before_purchase, is_repeat_customer

monthly_revenue.csv — 75 baris × 10 kolom

Agregat pesanan dan pendapatan per bulan.

Kolom: year, month, quarter, orders, revenue_usd, avg_order_value, avg_discount_pct, return_rate, unique_customers, new_customers

product_summary.csv — 140 baris × 9 kolom

Ringkasan performa per produk.

Kolom: category, product_name, total_orders, total_revenue_usd, avg_price, avg_rating, return_rate, avg_discount_pct, avg_delivery_days

Kolom dataset pelanggan

Tiga file pelanggan memiliki 23 kolom yang sama. Dataset lengkap berisi 8.000 baris; pembagian train dan test berisi 6.400 dan 1.600 baris.

customer_ml_dataset.csv — 8,000 baris × 23 kolom

Dataset pelanggan hasil rekayasa fitur untuk pemodelan churn.

Kolom: customer_id, country, gender, membership_tier, preferred_category, preferred_device, preferred_payment_method, acquisition_channel, age, total_orders, total_spend_usd, avg_order_value_usd, days_since_last_purchase, reviews_given, avg_review_score, returns_made, wishlist_items, newsletter_subscribed, customer_tenure_days, orders_per_year, reviews_per_order, returns_per_order, churned

customer_train.csv — 6,400 baris × 23 kolom

Subset untuk melatih model churn.

Kolom: customer_id, country, gender, membership_tier, preferred_category, preferred_device, preferred_payment_method, acquisition_channel, age, total_orders, total_spend_usd, avg_order_value_usd, days_since_last_purchase, reviews_given, avg_review_score, returns_made, wishlist_items, newsletter_subscribed, customer_tenure_days, orders_per_year, reviews_per_order, returns_per_order, churned

customer_test.csv — 1,600 baris × 23 kolom

Subset untuk mengevaluasi model churn.

Kolom: customer_id, country, gender, membership_tier, preferred_category, preferred_device, preferred_payment_method, acquisition_channel, age, total_orders, total_spend_usd, avg_order_value_usd, days_since_last_purchase, reviews_given, avg_review_score, returns_made, wishlist_items, newsletter_subscribed, customer_tenure_days, orders_per_year, reviews_per_order, returns_per_order, churned

Kolom penting: *customer_id* adalah ID pelanggan; kolom profil dan preferensi menjelaskan karakteristik pelanggan; kolom aktivitas seperti *total_orders*, *total_spend_usd*, dan *days_since_last_purchase* merangkum perilaku belanja; kolom tenure dan rasio merupakan fitur turunan; *churned* adalah label churn.
